SUMMARY

Computer Science graduate with industry experience at an AI startup building production-grade full-stack systems. Interned at TalentScreenAI, designing and building a cross-platform profile import feature and developing Laravel/React SaaS modules. Final-year project engineered a localized generative-AI Virtual Try-On application (latent diffusion, FastAPI, React). Also brings low-level systems skills from Rust-based real-time data pipelines and AWS microservices architecture. Seeking a software engineering role building products at any layer of the stack.

EXPERIENCE

AI Software Engineer Intern | TalentScreenAI | Oct 2025 - Feb 2026 | Kuala Lumpur

- Proposed and built a cross-platform profile import feature allowing users to migrate their existing profiles from LinkedIn and Indeed into the platform with one click, reducing onboarding friction
- Designed and implemented a universal scraper to extract structured user profile data from external job platforms, enabling seamless profile setup and ongoing sync
- Developed full-stack features using Laravel, React Inertia, and MySQL; designed REST APIs for recruitment workflows
- Contributed ideas that shaped product direction during the early-stage startup phase; collaborated in Agile sprints and client sync-ups

KEY PROJECTS

Twinin.AI - Virtual Try-On | Generative AI, FastAPI, React, ComfyUI

- Built 3-tier VTON system (React, FastAPI, headless ComfyUI) running latent diffusion models locally for fabric draping and lighting simulation
- Designed async FIFO GPU queue with WebSocket sync, preventing OOM on constrained VRAM; integrated ControlNet + IP-Adapter for pose/spatial conditioning
- Applied Scrum and mixed-method user research (surveys, SME interviews) to shape requirements and UI/UX

Real-Time Data Ingestion Pipeline | Rust, Tokio, Criterion.rs

- Built high-velocity SSE ingestion pipeline under strict latency deadlines using zero-copy memory management and stack allocation
- Designed priority-aware IPC via bounded MPSC channels for network backpressure; benchmarked sync vs Tokio async runtimes

Cloud Microservices Architecture | AWS, Python, FastAPI, React

- Refactored legacy monolith into serverless microservices on AWS (API Gateway, Lambda, SNS, S3), resolving I/O bottlenecks
- Implemented presigned-S3 uploads and traced distributed requests via X-Ray and CloudWatch for latency optimization

License Plate Recognition System | Python, OpenCV, EasyOCR, CustomTkinter

- Classical CV pipeline (CLAHE, morphology, contours) for end-to-end LPR without deep learning; deterministic prefix-lookup for state classification

Distributed HRM System | Java RMI, SSL/TLS, MySQL

- Secure client-server HRM with TLS, multithreaded concurrency, and comparative middleware research (CORBA, WCF, MOM)

ACHIEVEMENTS

- Led a 16-member fundraising project for a local orphanage, turning a RM200 (PKR 13,000) budget into RM900+ profit in 3 days through sales of Basbousa and iced tea; served as Research Manager and Accountant and authored the final project report
- Best Delegate (BD) winner at two consecutive Model United Nations (MUN) conferences, demonstrating leadership, diplomacy, and negotiation skills
- Organized "The Future of Tech Hiring" talk featuring a senior employee from SEEK Asia, collaborating with a team of 10 students

SKILLS

Languages: Python, Rust, Java, C++, C#, TypeScript, JavaScript, PHP/Laravel, Assembly (TASM)
AI & ML: Generative AI, Latent Diffusion, Computer Vision (OpenCV), NLP, LLM Fine-tuning, ControlNet
Cloud & Infra: AWS (Lambda, S3, API Gateway, SNS, CloudWatch, X-Ray), FastAPI, Docker
Systems: Real-Time Systems, Multithreading, IPC, TCP/IP, SSL/TLS, Zero-Copy
Web & Tools: React, Tailwind, WebSockets, REST APIs, Git, Agile/Scrum, Figma

EDUCATION

BSc Computer Science | Asia Pacific University of Technology & Innovation (APU), Malaysia | 2023 - 2026

Certifications: IBM AI Fundamentals | Red Hat System Administration I (RH124) | Cisco CCNA

Languages: English (Fluent) | Urdu (Fluent)
